The Path to Better Sleep

RestAssured is a virtual sleep medicine program, geared towards the detection and treatment of Obstructive and Central Sleep Apnea. We have designed the RestAssured process to be done completely at-home, making this an incredibly patient friendly option for sleep testing.

Patient Pathway

- 1 Patients that are referred to RestAssured will first go through a questionnaire to assess their symptoms, then we will pre-authorize their insurance.
- 2 Once payment is collected, the patient will complete a tele-health visit with a board-certified sleep provider from the RestAssured team.
- 3 We will then ship the at-home sleep study device to the patient's house for them to utilize.
- 4 The results are uploaded into the Sleep providers cloud for the interpretation, and the patient is notified to schedule their follow up televisit.
- 5 The follow up visit is conducted with their RestAssured sleep provider, where results are discussed and treatment is ordered (if needed).
